

## Technical Business Analyst

We are looking for a Technical Business Analyst with skills and experience around integrations and EMR/EHR related functionality. All projects are geared around our commercial off-the-shelf platform. As a business analyst at Intrahealth, you would be working on challenging international projects that involve innovative electronic healthcare solutions. This position requires high-skill participation in a variety of meaningful and rewarding assignments, including complex vendor integration activities, enterprise-level implementations in Canada and abroad, app evolution (desktop and mobile), web-based patient and provider portals, and SaaS solutions.

Intrahealth is a global software and associated services company supplying world class solutions to the Canadian, Australian, and New Zealand healthcare markets.

**Position:** Business Analyst

**Location:** North Vancouver, BC

**Reports to:** XX

**Remuneration Guide:** Consistent with qualifications and experience

### Your Responsibilities

- Gather requirements through a variety of methods, including but not limited to document analysis, interviews, and site visits
- Write functional and/or system specifications documents that translate user requirements into a document against which developers can work
- Develop use cases, including edge cases
- Create and execute test plans to support testing of new features and regression testing of products as part of the release process.
- Act as a knowledge resource and mentor across areas of expertise, including peer review of specifications

### Position Requirements

- Bachelor's degree, or a two-year post-secondary diploma, or certification with a computing element, or equivalent knowledge gained through combination of education and experience
- A minimum of 3 years as a technical business analyst
- Intimate knowledge of software development life cycle
- Strong communication skills with both technical people and business users, including the ability to establish rapport with clients and colleagues

- Work and communicate effectively across varied project team environments: on-site with customers, local office, and global remote
- Work experience in some of the following areas:
  - i. Business/technical requirements analysis
  - ii. Business process modeling/mapping, methodology, methodology development, and data modeling
  - iii. Overseeing design, development, and implementation of software
  - iv. Collecting and analyzing data using a variety of data management tools
  - v. Systems integration projects
  - vi. Structured approaches such as the rational methodology, UML, SCRUM, or AGILE
- Experience working on projects related to some of the following areas:
  - i. HL7
  - ii. Web Services
  - iii. Integrations (such as Client/Provider Registries, Provincial Billing, HIS systems, enrolment services, etc.)
  - iv. Data Conversions/Migrations
  - v. Communication brokers (ex: Biztalk)
  - vi. HTML5
  - vii. Mobile Technologies
  - viii. HTTPS
- Canadian citizenship or permanent residency
- Some travel may be required of the role.
